Diktamen: What's spoken matters.

1. Record a dictation
2. Send it to a transcription option
3. Receive your transcribed document

Diktamen

What's spoken matters.

Working faster with your voice

At Diktamen we take away all the barriers around implementing voice-to-text technology. This is carried by supplying speech workflow tools, which accelerate the speed of administration and include Real-time Intelligence and Business Intelligence reporting abilities as part of our platform - allowing firms to benefit from the time saved. Our solutions are low cost without compromising the innovation of the technology solutions. There are also no fixed, inflexible contracts.

As an industry leading provider, we aim to support firms of all sizes with our extensive knowledge and expertise that has been built over the last decade. Whether it's installing a basic bespoke digital dictation and transcription system, or accelerating your workflow with Speech Recognition – at Diktamen we make improving your process easy.

Mobile Digital Dictation

The ability to quickly dictate notes or update case files should not be restricted to an office or client site. Our digital dictation solution supports users with an easy-to-use platform that is accessible through desktop and smart phone, allowing you to easily work 'on-the-go'. We also provide users with the ability to access their dictations and data around the clock. Authors simply dictate, and the voice note is automatically sent for transcription then stored directly into their inetrnal information system.
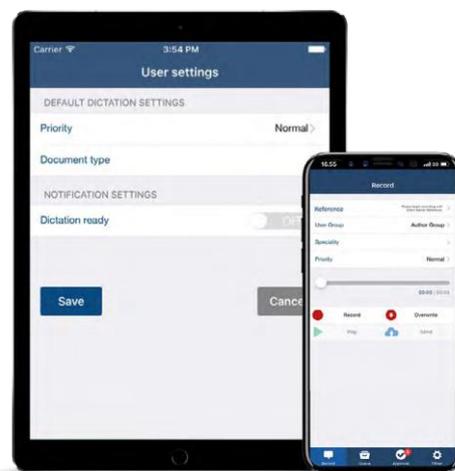

Speech Recognition

With our Speech Recognition module configured; it's quick and easy to dictate straight into a client file or document without typing. Upon dictating, the voice note will transcribe and appear immediately into the document. Our Speech Recognition module gives you the ability to accelerate document turnaround time, and reduce time spent on transcription.

Consultation and Meeting Recordings

At Diktamen, our adaptable solution provides users with the ability to record any meeting scenario, no matter the location or number of participants. We have many years' experience with the best conference hardware and their placement, so we are able to make recording the audio of a consultation or meeting – a very simple thing to do. We automatically segment the audio file into sections and send these to allow typists to action or transcribe the necessary parts of the audio, possibly even before the consultation or meeting has even finished.

Transcription Overflow Support

We provide low cost transcription options to support any backlogs you accumulate, no matter how small or large. We are also able to transcribe any voice file in any audio format, allowing you to turn a voice file into a document quickly. Diktamen are the only dictation provider that has an in-house specialist transcription team, and initially started developing software to support our transcriptionists.
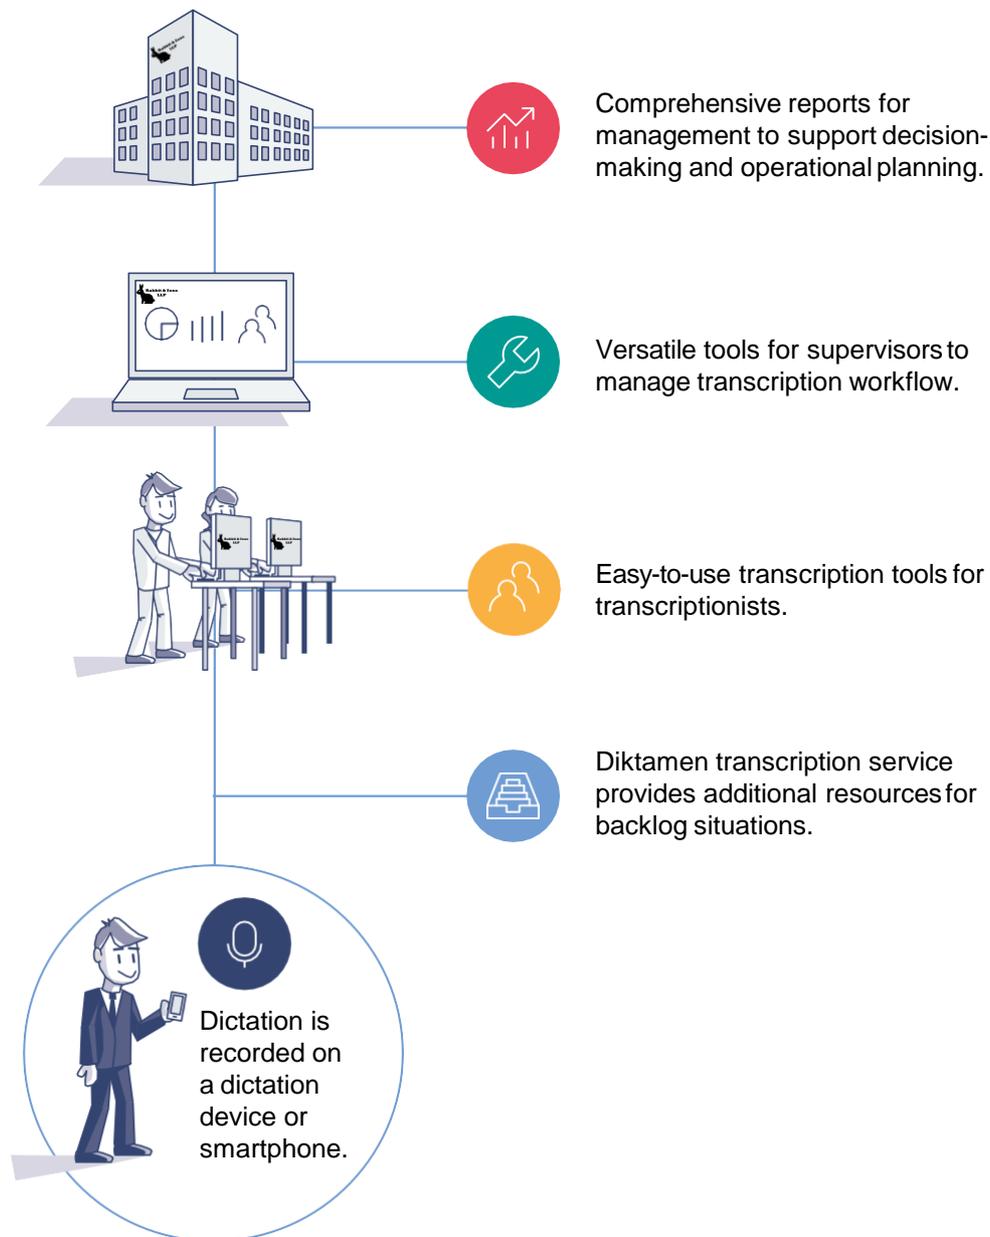

Bespoke Workflow Management Configuration

The effective use of resources, including time, money and staff, is extremely important for service providers. At Diktamen we understand every organisation is different, and offer a bespoke deployment of our solutions which are designed specifically for your business at no additional cost. We work with you to tailor the workflow process, so we can ensure your solution is built-for-purpose and includes all the necessary personal features required. Our workflow management system utilises documentation workflow metrics to provide detailed analysis of your organisation. For all Diktamen installations we include our administrator tool which provide reporting abilities and insight into your team's performance.

How Diktamen works

1. **Record a dictation**
2. **Send it to a transcription option**
3. **Receive your transcribed document**

Comprehensive reports for management to support decision-making and operational planning.
